Built-in Bench

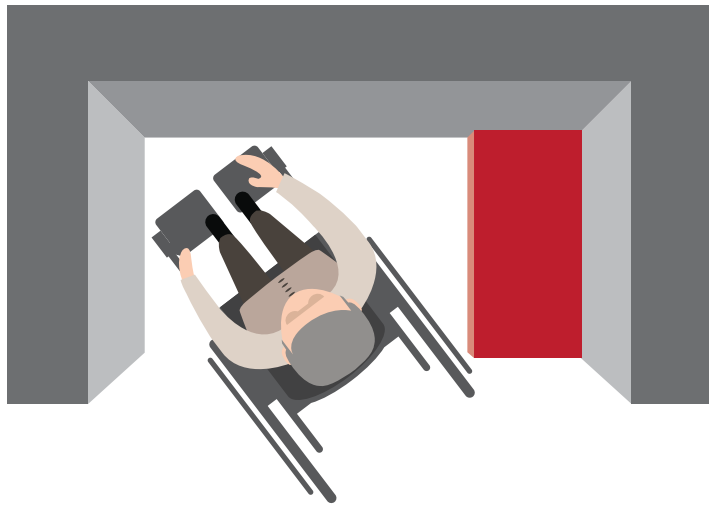

Folding Seat

Fold Up. Save Space.

70%

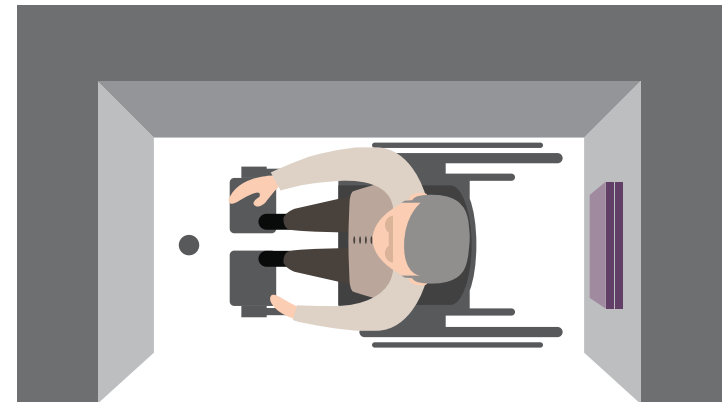

free floor space
with built-in bench

Space is a premium in the bathroom. By installing a Built-in Bench, valuable floor space is permanently lost. If your customers' mobility changes, a Built-in Bench can become a major obstacle.

Folding Seats are there when needed, and otherwise stored out of the way. This is ideal in multi-generational homes, where several people use the shower, yet only one person needs the support. Establish yourself as a forward-thinking retailer.

Stay Warm. Rest & Relax.

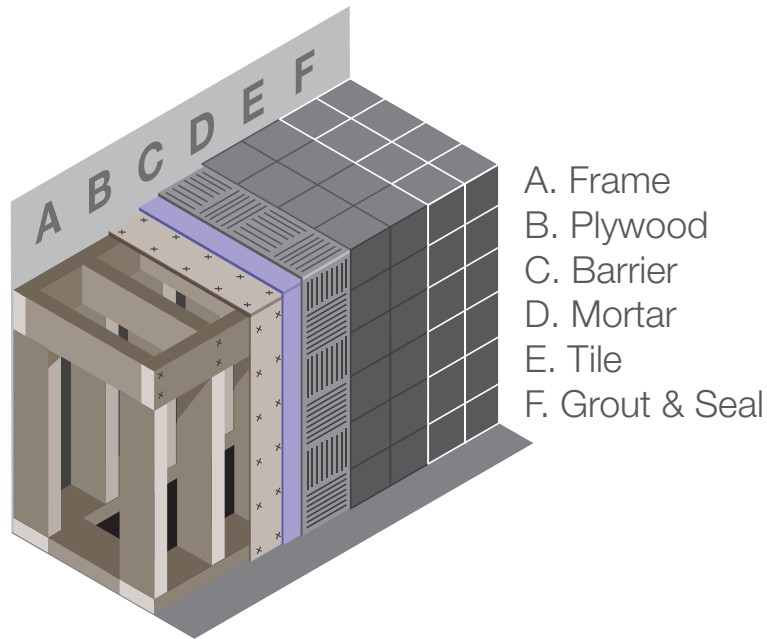

On a cold morning, sitting on a porcelain toilet seat can be a shock to your body! Similar materials like tile and natural stone are heat conductors, great at taking heat from your body. Your clients will experience the same "cold shock" with Built-in Benches.

Conversely, bamboo is a poor heat conductor. This porous material tends to trap heat within air pockets of the material. The bamboo back rest also helps prevent cold shock from the tiled wall, while maintaining a natural feeling and atmosphere.

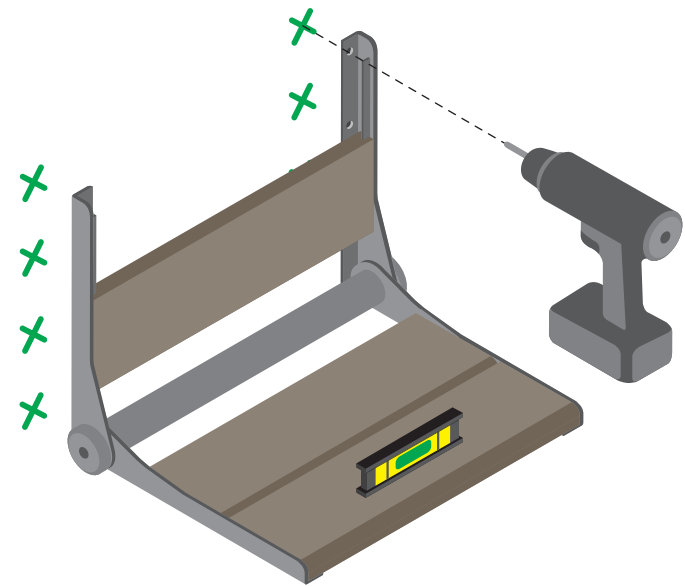

Save Time. Save Money.

6-8hrs

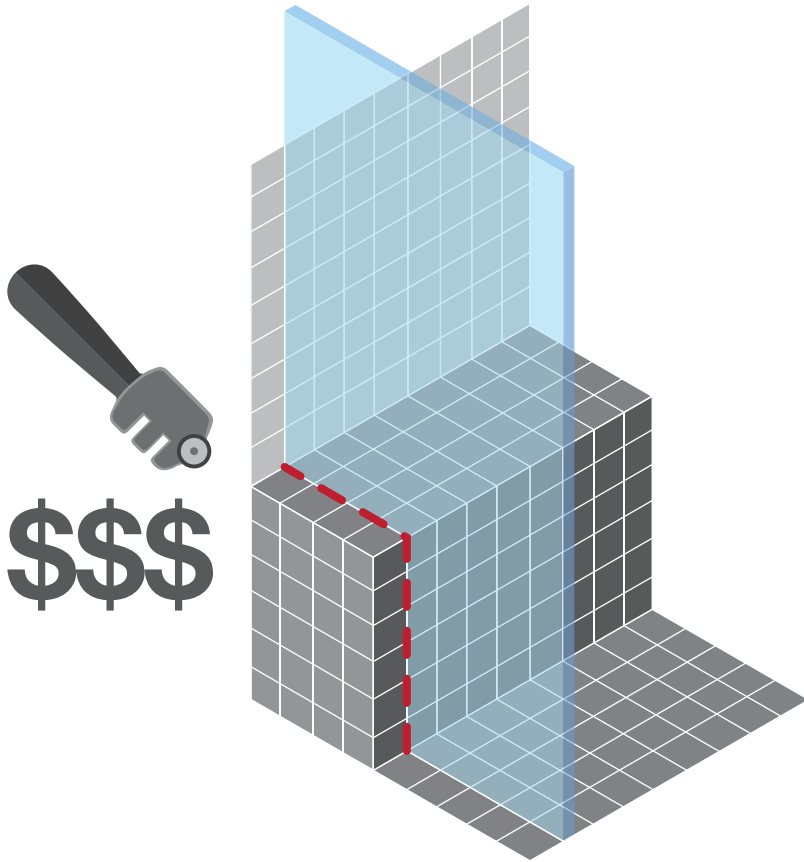

The process of installing a Built-in Bench is labour intensive (measuring, cutting, framing, securing, tiling, sealing, grouting, etc.). This time consuming process can extend your time on the jobsite by several days (approx 6-8 hours plus drying / setting).

1 hr max

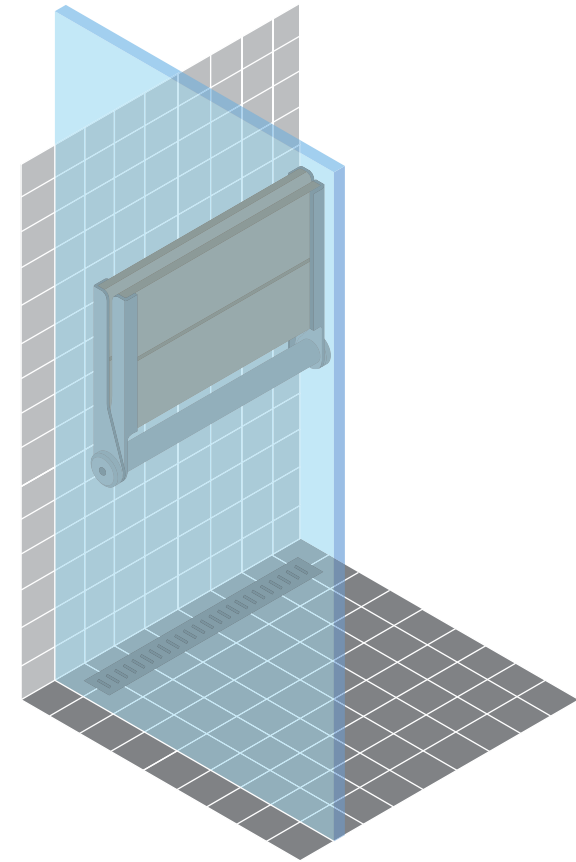

Folding Seats make the job of installation quick and easy. Simply level, drill and install the 8 screws. When attached into wood backing, the Serena-Seat will hold up to 500lbs / 227kg.

Less Cutting. Less Cost.

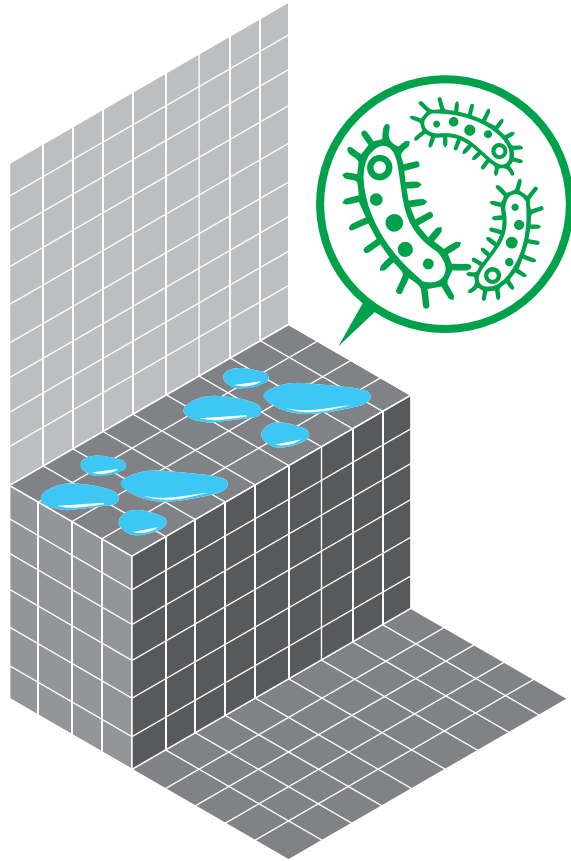

Built-in Benches can be challenging with glass walls. If the bench ends before the glass wall, it leaves an awkward space. If the bench extends thru the glass wall, it will need an expensive custom glass wall (with a longer lead time).

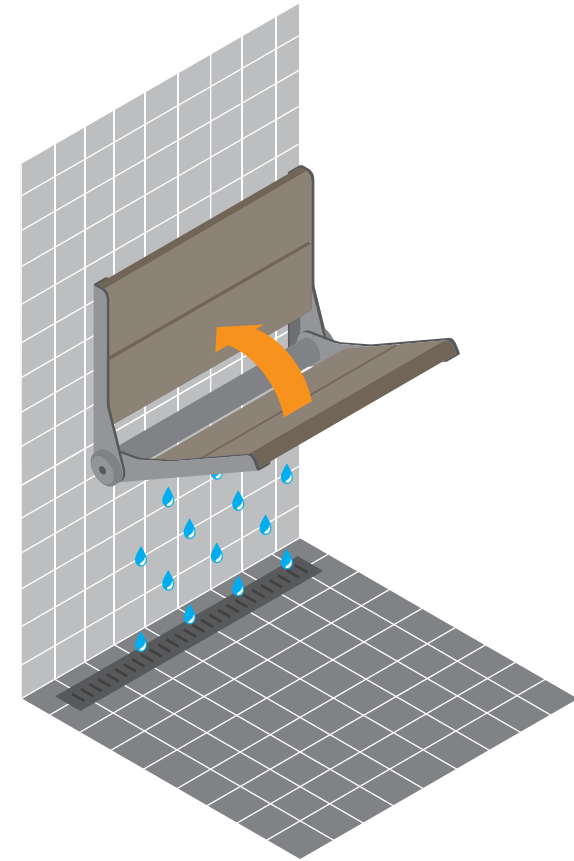

Folding seats provide function at a fraction of the cost. They provide flexibility in design and installation by using “off-the-shelf” glass walls that require no modification.

Less Water. Less Mold.

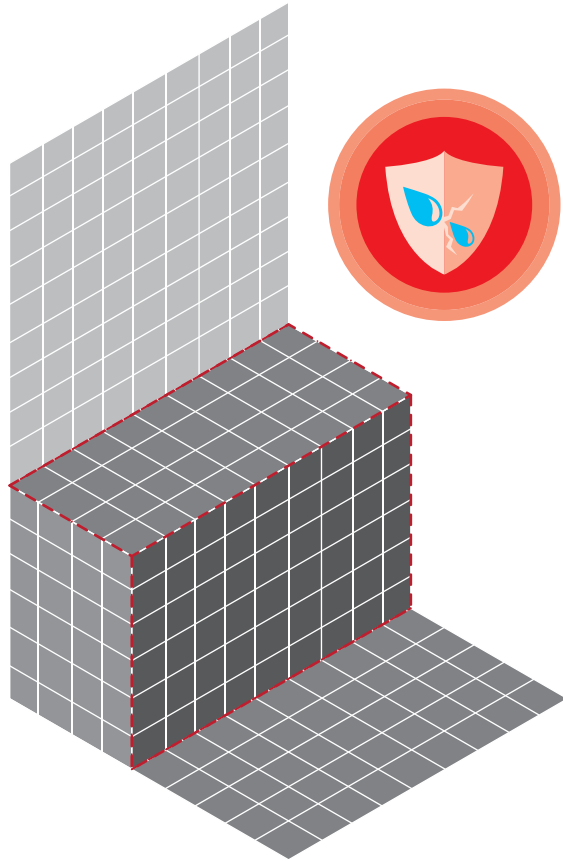

Built-in Benches are flat and collect water on the sitting surface. As water collects, mold forms which requires regular cleaning to keep under control. Also, resting water has a higher potential of penetrating the seal into the wall.

Folding Seats get “drained” from resting water when they are folded up, reducing the bacteria & mold growth. They have distinct holes for wall fastening, which are easier to seal from water penetration.

Less Seams. Less Hassle.

Built-in Benches have many tiled seams that must be sealed for water protection. The seams can be long in length and numerous, with the responsibility on the contractor to ensure the seal is guaranteed.

Folding Seats feature 8 distinct mounting points that are easily accessible to make a water tight seal. The back panels of bamboo are removable to access the wall for cleaning.
